Homotopic paths: paths that be deformed into one another with a finite sequence of such elementary deformations. We can therefore define *for each window* $B \subset \mathbb{Z}^2$ a fundamental group

We can therefore define for each window $B \subset \mathbb{Z}^2$ a fundamental group $\pi_1^B(X)$:

イロン イ団 とくほと くほとう

э.

We can therefore define for each window $B \subset \mathbb{Z}^2$ a fundamental group $\pi_1^B(X)$:

• Group elements are (equivalence classes of) loops

イロン イ団 とくほと くほとう

3

We can therefore define for each window $B \subset \mathbb{Z}^2$ a fundamental group $\pi_1^B(X)$:

- Group elements are (equivalence classes of) loops
- The group operation is the concatenation of loops

We can therefore define for each window $B \subset \mathbb{Z}^2$ a fundamental group $\pi_1^B(X)$:

- Group elements are (equivalence classes of) loops
- The group operation is the concatenation of loops

(To get a single object, we need a way to combine all those groups $\pi_1^B(X)$ in a single group $\pi_1(X)$: we take the projective limit of those groups – not important here)

イロト イヨト イヨト イヨト

A natural question is to determine if we can realize arbitrary groups as fundamental groups of some subshifts.

イロト イヨト イヨト イヨト

3

A natural question is to determine if we can realize arbitrary groups as fundamental groups of some subshifts.

A first answer in the original article: we can at least make all the **finite groups**.

《口》《聞》《臣》《臣》

A natural question is to determine if we can realize arbitrary groups as fundamental groups of some subshifts.

A first answer in the original article: we can at least make all the **finite** groups.

We show that we can in fact realize (at least) all the **finitely presented** groups.

Realizing Finitely Pres

Finitely Presented Groups Sketch of the proof

Theorem (P., Vanier [PSV23])

Every finitely presented group is the projective fundamental group of some SFT.

The idea of the construction is to see paths in the subshift as words on the alphabet of generators, and their deformation as relations. More precisely:

- Some tiles will correspond to generators
- Paths will correspond to words on those generators
- Local rules will ensure that deformations correspond to insertion/deletion of relators

Finitely Presented Groups Sketch of the proof

Normalizing coherent paths

The previous remarks mean that a coherent path can be put into some kind of normal form. However, all loops need not be coherent – even when the fundamental group is trivial !

Finitely Presented Groups Sketch of the proof

Normalizing coherent paths

The previous remarks mean that a coherent path can be put into some kind of normal form. However, all loops need not be coherent – even when the fundamental group is trivial ! Solution: decompose a loop into a sequence of coherent paths, and add contractible loops at the junction.

イロト イヨト イヨト イヨト

Finitely Presented Groups Sketch of the proof

Path decomposition

Whenever we have a incoherent path, we can split it in *normalized* coherent paths:

(日) (四) (王) (王) (王)

Finitely Presented Groups Sketch of the proof

Path decomposition

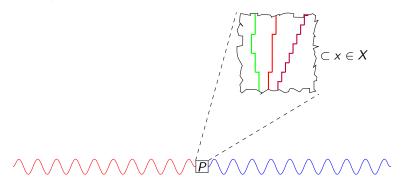

Whenever we have a incoherent path, we can split it in *normalized* coherent paths:

イロン イ団 と イヨン イヨン

Finitely Presented Groups Sketch of the proof

Path decomposition

Whenever we have a incoherent path, we can split it in *normalized* coherent paths:

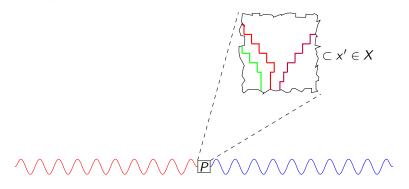

∃ ► < ∃ ►</p>

Finitely Presented Groups Sketch of the proof

Path decomposition

Whenever we have a incoherent path, we can split it in *normalized* coherent paths:

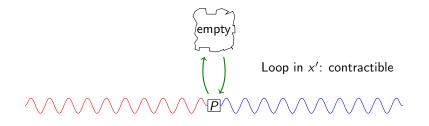

프 () () () (

Finitely Presented Groups Sketch of the proof

Path decomposition

Whenever we have a incoherent path, we can split it in *normalized* coherent paths:

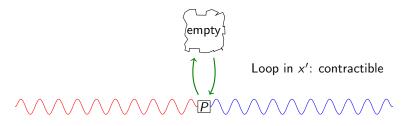

- 세 프 ► - 세 프 ►

Image: A matrix

Finitely Presented Groups Sketch of the proof

Path decomposition

Whenever we have a incoherent path, we can split it in *normalized* coherent paths:

This means that we can deform the path so that each sub-coherent path starts and ends with empty patterns: can deform them independently.

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >
